PROJECTS

AI-DRIVE System for Early Diagnosis of Diabetic Eye Diseases. Developed a full-stack web application for early detection of multiple diabetic eye diseases using deep learning. Trained and implemented a state-of-the-art EfficientNetV2-S model on Fundus and OCT image datasets, achieving high classification accuracy. Integrated Grad-CAM visualizations to provide model explainability, highlighting retinal areas influencing the diagnostic output to build trust with medical professionals. Integrated Google's Gemini AI to generate automated, context-aware medical advice based on model predictions, providing immediate insights to users. ([Project Link](#))

Predictive Analysis of Big-Mart Sales. Used Linear and Ridge Regression to forecast retail sales by analyzing product and store data. Handled missing values and categorical features, with Ridge Regression showing better accuracy (measured by MAE, MSE, RMSE). The system helps managers make inventory decisions via a dual interface for predictions and model monitoring. ([Project Link](#))
